Daniil Karasev

Product Manager · Platform, APIs & Integrations in FinTech

I build shared foundations that many teams build on, and get those teams aligned without owning their roadmaps.

PROFILE

Product Manager with 4+ years at T-Bank (formerly Tinkoff), one of the world's largest fully digital banks, where I grew from systems analyst to owning "TWork SME", the business-client service platform that many product teams plug their features into, and leading a cross-functional team of 15. My work sits where products meet through APIs: integration contracts with master systems, authorization, reliability, and the alignment it takes to get dozens of teams to change their side. I read API docs and code with engineers, prototype with AI tools daily, and know payments and acquiring from the inside. English and German at C1.

WHAT I'M KNOWN FOR

- **Platform strategy, built and defended.** Positioned TWork SME as a platform serving many products: metric tree, strategy and OKRs defended at C-level, worth ≈€2M/yr.
- **API work with engineers.** Moved integrations from S2S to C2S authorization across master-system API contracts; added pagination to a master-system method (failures −99%); bulk-API errors 20%→5%.
- **Influence without authority.** Got master-system teams in a dozens-team initiative to put our API needs on their roadmaps; 10 teams aligned on one target architecture in a 35,000-client migration.

EXPERIENCE

Product Manager **Jan 2025 — Present**

T-Bank (T-Business), the T-Bank ecosystem's online bank for SMEs and corporates. Moscow, RU

Platform & API ownership:

- **Strategy & roadmap.** Wrote the platform strategy from analytics and a metric tree, defended it to department leadership, translated it into OKRs and presented it to developers and the tech unit. Own a roadmap prioritised with RICE weighted by product metrics, technical blockers and dependencies on other teams.
- **API security & governance.** Audited every micro-frontend integration with InfoSec, listed the S2S calls and agreed with the master-system teams a phased move to C2S authorization in their API contracts; secured the plan at the InfoSec risk committee without stopping product work. New functionality is built on C2S by default.
- **Reliability.** Traced failing terminal lists through an aggregator service to a master-system method with no pagination; got the method updated and redundant frontend logic removed: failures for large clients −99%. Clustered failed bulk-API responses with an AI model and fixed the data with the service team: error rate 20%→5%.
- **Shared features across products.** Built quick search over servicing procedures owned by different product teams, aligned with each team on defaults and placement, and proved it in an A/B test: +0.05 actions/hour, ≈€150K/yr.
- **Cross-team delivery.** Retiring the online-account mirror with dozens of teams: wrote business requirements for the master systems, brought in InfoSec and anti-fraud to get them prioritised and planned our roadmap around their API delivery dates; 5 of 9 sections moved, 90%+ of tasks on plan.
- **Team & delivery.** Lead a team of 15 (analysts, engineers, QA, design); time-to-market −20%, 90% on time; Payroll and Merchant Acquiring coverage: ≈€150K/yr saved.

AI tools & developer experience:

- **Agentic workflow.** With the tech lead designed a multi-agent pipeline on the bank's internal agentic coding CLI that searches the repositories, drafts the spec and opens the Jira task: specs 20% faster. Built a GitLab repository of agent skills so analysts find integrations and docs faster, and taught them to build proxy methods to master-system APIs.

Post-merger integration (Rosbank → T-Bank):

- **Systems integration.** Led the service migration of ≈35,000 corporate clients with a team of 8 and C-level stakeholders (17,000 on schedule); mapped integration contracts and drove decommissioning of legacy systems across 10 teams; ≈€500K/yr saved.

Business / Systems Analyst **Oct 2023 — Jan 2025**

T-Bank (T-Business) Moscow, RU · Built the large-corporate service line from scratch (group revenue ≥ €160M/yr).

- **Payments & acquiring.** Built Trade Acquiring support for ≈200 of the country's largest retail chains at CSAT 4.9; cut misrouted transfers 55→10% and raised CSAT 4.4→4.7 through routing logic.
- **Specs as the standard.** Wrote ADRs and specs with data models, integrations and API-to-frontend field mapping; my template became the team standard. A "Letters" service built from client interviews now serves 10,000+ clients.

Project Manager **Aug 2022 — Oct 2023**

Eastern Express, a cross-border parcel startup. Remote / EU

- **Partner integrations.** Integrated DPD, UPS and GLS carrier APIs: studied partner docs, ran joint working groups with their developers, defined the API contract and data model. Took the web and mobile service to 5,000 MAU.

EDUCATION

B.Sc. Computer Science — Otto-von-Guericke Universität Magdeburg, Germany 2016–2018
M.Sc. Business Analytics — Higher School of Economics (HSE), Moscow 2022–2025
PhD Program, Computer Science (Quantitative Methods in Economics) — Synergy University, Moscow 2025–Present

SKILLS

API & platform	REST API contracts, AuthN/AuthZ (S2S / C2S), pagination & error handling, integration architecture, ADRs, Swagger, Postman
Data & AI	Metric trees, A/B tests, SQL, Python, Grafana; LLM agents (Claude, QWEN), RAG, vibe coding
Ways of working	Roadmaps & OKRs, RICE, Discovery (CustDev, JTBD), Agile / Scrum; Jira, Confluence, GitLab, Obsidian, Figma

LANGUAGES & CERTIFICATIONS

Russian — Native English — C1 German — C1 (3 years in Germany) Japanese — B1
T-Bank internal courses — Business & Systems Analysis · People & Team Management · Product Analytics
